EESHAN GARG

Cybersecurity | SOC Operations | Digital Forensics | Threat Intelligence

Vadodara, Gujarat, India | +91 8359888779 | eeshan.garg.888@gmail.com

Portfolio: eeshan-agrawal.vercel.app | LinkedIn: linkedin.com/in/eeshangarg888 | GitHub: github.com/Die-Another-Day | Medium: eeshan-agrawal.medium.com

PROFESSIONAL SUMMARY

Cybersecurity professional and B.Tech Computer Science student specialising in Security Operations Center (SOC) operations (L1/L2), incident response, digital forensics, and threat intelligence. Certified Red Team Analyst (CRTA) with hands-on experience in Splunk log triage and alert classification across four security internships. Investigated a real brute-force attack end to end, including attack vector tracing, forensic evidence collection, and incident reporting. Published researcher (SSRN, 2026). Seeking SOC Analyst / Cybersecurity Analyst / Security Analyst roles — on-site/hybrid in Vadodara and remote.

TECHNICAL SKILLS

- **SIEM & Monitoring:** Splunk (SPL2), ELK Stack, ManageEngine Log360, Wazuh EDR, Sysmon, Sophos Firewall
- **Security Operations:** Alert Triage, Incident Response, Threat Hunting, Log Analysis, IDS/IPS, Phishing Analysis, Threat Intelligence, OSINT
- **Forensics & Offensive Security:** Digital Forensics (NTFS), Wireshark, tcpdump, Nmap, Metasploit, Burp Suite, GDB, strace, Vulnerability Assessment and Penetration Testing (VAPT), MITRE ATT&CK, YARA Rules, CIS Benchmarks, NIST 800-53
- **Languages & Tools:** Python, Bash, SQL, C, Java, JavaScript, TypeScript, Git, Docker, Linux, Windows, AWS, Azure

EXPERIENCE

Security Operations Intern — CodeAlpha | Hybrid | May 2026 – Jul 2026

- Applied network security principles and Intrusion Detection/Prevention Systems (IDS/IPS) concepts to monitor and analyse security events
- Analysed phishing threats and applied threat detection methodologies to identify malicious indicators and improve detection accuracy
- Built SentinelSight, a network intelligence platform, and a phishing awareness training module as public deliverables

Cybersecurity Tools & System Development Intern — Cryptonic Area | Remote | Jan 2026 – Mar 2026

- Analysed and triaged simulated security logs in Splunk, classifying alerts by severity and reducing false-positive review time
- Developed secure authentication workflows and produced vulnerability reports with prioritised remediation recommendations
- Executed simulated incident response scenarios and documented mitigation strategies for recurring alert patterns

VAPT & Security Analysis Intern — Plasmid Innovation Ltd | Remote | Apr 2025 – Jul 2025

- Performed vulnerability assessment and reconnaissance using industry-standard tools to identify exploitable weaknesses
- Applied VAPT, incident response, and security monitoring concepts to assess and harden target environments
- Strengthened defensive security practices through practical tooling and structured security analysis

Cybersecurity Intern — ShadowFox | Remote | Nov 2024 – Dec 2024

- Applied system security concepts to identify and analyse vulnerabilities in lab environments
- Completed hands-on vulnerability identification exercises across host and network targets

Virtual Cybersecurity Job Simulations — Forage | Remote | 2024 – 2026

- Completed job simulations for Mastercard, PwC, ANZ, AIG, JPMorgan, and Telstra covering SOC operations, incident response, threat monitoring, and risk analysis

RESEARCH & PUBLICATIONS

Garg, E. (2026). Unified Application Security Assessment Framework (UASAF). Social Science Research Network (SSRN). DOI: 10.2139/ssrn.7014078

- Integrated static code analysis, B2R Capture The Flag (CTF) exploit-chain simulation, and phishing vectors into a unified assessment framework; demonstrated that 94.3% of exploitable attack chains involve compounding vulnerabilities

PROJECTS

- **The MPF — Mobile Penetration Testing Framework — Ruby, Android Security:** Metasploit-inspired framework for Android application security assessment, combining static and dynamic analysis with modular exploit–payload modules, attack-chain reasoning and reporting. Also installable via the MPF APT repository: https://die-another-day.github.io/The-MPF-APT Chocolatey: https://community.chocolatey.org/packages/mpf/2.2.1
- **Compliancity — Python, FastAPI:** Full-stack, agent-based platform scanning Linux and Windows hosts against a 19-control checklist mapped to CIS Benchmarks and NIST 800-53, with severity-weighted compliance scoring, configuration drift tracking and PDF/HTML/JSON reports. Live portal: https://compliancity.vercel.app/ Code: https://github.com/Die-Another-Day/Security-Policy-Compliance-Checker
- **SecureOS — Debian 12, Linux, Python:** Real bootable cybersecurity OS (v3, 2026), evolved from LoveOS (2025): kernel 6.1.0-54, GRUB, systemd and a localhost-only web console with real Nmap, log analysis and hashing, plus filesystem, drivers, persistent logging, task manager, battery and NetworkManager Wi-Fi/Ethernet, with a GUI on demand via secureos-gui (XFCE). Repo: https://github.com/Die-Another-Day/SecureOS

EDUCATION

B.Tech, Computer Science & Engineering — Parul University, Vadodara, Gujarat | 2023 – 2027 | CGPA: 8.2

Relevant Coursework: Network Security, Ethical Hacking, Digital Forensics, Cloud Security

- Trained across 25+ global platforms including IBM, Cisco, EC-Council, and Homeland Security programmes
- Completed Digital Forensics and Incident Response (DFIR) workshop by Drona Cyber Solutions at Parul University
- Completed 7-day cybersecurity training with C3iHub, IIT Kanpur covering VAPT, PowerShell, BitLocker, and Wazuh EDR

CERTIFICATIONS

CRTA (Certified Red Team Analyst) — CyberWayLabs | BelkaGPT — Belkasoft | Endpoint Security — Cisco | Network Security, Security Operations & Cloud Security Fundamentals — Palo Alto Networks | Intro to SPL2 — Splunk | Defensive Security & Cyber Risk — Cybrary | NTFS Forensics & TeamViewer Forensics — LetsDefend | Certified Ethereum Learner — HackQuest

TECHNICAL WRITING

Published 7+ articles on Medium (InfoSec Write-ups, MeetCyber, OSINT Team), including a SOC257 VPN incident investigation (true positive), an OSINT / Managed Service Provider breach investigation, and Wireshark network forensics deep-dives covering packet analysis and incident reconstruction.
